Radial Leaded Ceramic Disc Capacitors

Safety Standard Recognized, ERP610 Encapsulated, X1 760 VAC/Y1 500 VAC (Industrial Grade)

a YAGEO company

Overview

KEMET's ERP610 encapsulated radial leaded ceramic disc capacitors are specifically designed for interferencesuppression AC line filtering applications. Having internationally recognized safety certifications, these capacitors are well-suited for applications that require keeping potentially disruptive or damaging line transients and EMI out of susceptible equipment. They are also an ideal solution when needing to suppress line disturbances at the source.

Safety certified capacitors are classified as either X and/or Y capacitors. Class X capacitors are primarily used in line-to-line (across-the-line) applications.

In this application there is no danger of electric shock to humans should the capacitor fail, but could result in a risk of fire. The class Y capacitor is primarily used in line-toground (line by-pass) applications. In this application, failure of the capacitor could lead to danger of electric shock.

With a working voltage of 760 VAC in line-to-line (class X) and 500 VAC in line-to-ground (class Y) applications, these safety capacitors meet the impulse test criteria outlined in IEC Standard 60384. Meeting subclass X1 and Y1 requirements, these devices are certified to withstand impulses up to 4 KV (X1) and 8 KV (Y1) respectively. These encapsulated devices also meet the flame test requirements outlined in UL Standard 94 V-0.

Benefits

- Safety Standard Recognized (IEC 60384-14)
- Reliable operation up to 125°C
- Class X1/Y1
- 10 mm and 12.5 mm lead spacing
- RoHS compliant
- Capacitance offerings ranging from 33 pF up to 4.7 nF
- \bullet Available capacitance tolerances of ±10% and ±20%
- High reliability
- Preformed (crimped) or straight lead configurations
- Non-polar device, minimizing installation concerns
- Encapsulation meets flammability standard UL 94 V-0

Applications

- Line-to-Line (Class X) filtering
- Line-to-Ground (Class Y) filtering
- Antenna coupling
- Primary and secondary coupling (switching power supplies)
- Line disturbances suppression (motors and motor controls, relays, switching power supplies, and invertors)

| Preformed leads outside crimp | H0 = 16.0 mm | TDR | TER | | |
| Inline wire | H0 = 16.0 mm | .0 mm YRD YRE | | | |

¹ 5 mm and 7 mm lead spacing options are not available for ERP610.

Approval Standard and Certification Number

| Safety Standard | Specification | Certificate Number |
|-----------------|------------------------------|---------------------------|
| VDE | EN 132400 | <u>40001993, 40001996</u> |
| UL CAN/CSA | UL 60384-14 and E60384-14 | <u>E356389</u> |

These devices are VDE/ENEC recognized for antenna coupling and AC line-to-line (class X) and line-to-ground (class Y) applications per IEC60384-14.

Environmental Compliance

These devices are RoHS compliant. They meet all the requirements set forth by both EU and China RoHS directives.

Storage & Handling

KEMET's ER Series Safety Rated capacitors should not be stored in an environment that contains a corrosive atmosphere where sulphide or chloride gas, acid, alkali or salt are present. Additionally, exposure to moisture should be avoided. Storage does not affect the solderability of the leads for up to 24 months (temperature: +10°C to +35°C, relatively humidity: up to 60%). Class 2 ceramic dielectric capacitors are also subject to aging.

OBSOLETE

General Specifications/Performance Characteristics

| Dielectric/Temperature Characteristic | U2J | Y5S | Y5T | Y5U |
|--|--|---------------------------------|--------------------------|-----|
| Operating Temperature Range: | -40°C to +125°C | | | |
| Capacitance Change with Reference to +25°C and 0 VDC Applied (TCC): | -750 ±120 ppm/°C | -750 ±120 ppm/°C ±22% +22%/-33% | | |
| Test Voltage Between Terminals | Component test: 4,000 VAC, 50 Hz, 2 seconds As repeated test admissible only once with 4,000 VAC, 50 Hz, 60 seconds Random sampling test (destructive test): 4,000 VAC, 50 Hz, 60 seconds | | | |
| Dielectric Strength of Body Insulation | 4 | 4,000 VAC, 50 Hz, 60 se | conds (destructive test) | |
| ¹ Dissipation Factor (tanδ) at +25°C ¹ | 0.50% 2.50% | | | |
| Insulation Resistance (IR) Limit at +25°C | 10,000 MΩ minimum (500 VDC applied for 60 ±5 seconds at 25°C) | | | |

*C = Nominal capacitance

¹ Capacitance and Dissipation Factor (DF) measured under the following conditions:

U2J: 1 MHz \pm 100 kHz and 1.0 \pm 0.2 V_{rms}

Y5S, Y5T and Y5U: 1 kHz ±50 Hz and 1.0 ±0.2 V_{rms}

Note: When measuring capacitance, it is important to ensure the set voltage level is held constant. The HP4284 and Agilent E4980 have a feature known as Automatic Level Control (ALC). The ALC feature should be switched to "ON."

Soldering test for capacitors with wire leads (according to IEC 60068-2-20, solder bath method)

Sodering Recommendations

When soldering this product to a PCB/PWB, do not exceed the solder heat resistance specification of the capacitor. Subjecting this product to excessive heating could reflow the solder joint between the lead and ceramic element and/or may result in thermal shocks that can crack the ceramic element.

Cleaning Recommendations

The components should be cleaned immediately following the soldering operation with vapor degreasers.

Marking

¹ EVOX RIFA and all associated products were acuired by KEMET in 2007. The EVOX RIFA trademark is still used on the capacitor marking.

Disclaimer

All product specifications, statements, information and data (collectively, the "Information") in this datasheet are subject to change. The customer is responsible for checking and verifying the extent to which the Information contained in this publication is applicable to an order at the time the order is placed. All Information given herein is believed to be accurate and reliable, but it is presented without guarantee, warranty, or responsibility of any kind, expressed or implied.

RSOI FTF

Statements of suitability for certain applications are based on KEMET Electronics Corporation's ("KEMET") knowledge of typical operating conditions for such applications, but are not intended to constitute – and KEMET specifically disclaims – any warranty concerning suitability for a specific customer application or use. The Information is intended for use only by customers who have the requisite experience and capability to determine the correct products for their application. Any technical advice inferred from this Information or otherwise provided by KEMET with reference to the use of KEMET's products is given gratis, and KEMET assumes no obligation or liability for the advice given or results obtained.

Although KEMET designs and manufactures its products to the most stringent quality and safety standards, given the current state of the art, isolated component failures may still occur. Accordingly, customer applications which require a high degree of reliability or safety should employ suitable designs or other safeguards (such as installation of protective circuitry or redundancies) in order to ensure that the failure of an electrical component does not result in a risk of personal injury or property damage.

Although all product-related warnings, cautions and notes must be observed, the customer should not assume that all safety measures are indicted or that other measures may not be required.
