

## TPS60151 5-V and 140-mA Charge Pump

### 1 Features

- Input Voltage Range 2.7 V to 5.5 V
- Fixed Output Voltage of 5 V
- Maximum Output Current: 140 mA
- 1.5-MHz Switching Frequency
- Typical 90- $\mu$ A Quiescent Current at No Load Condition (Skip Mode)
- Output Reverse Current Protection
- X2 Charge Pump
- Hardware Enable and Disable Function
- Built-in Soft Start
- Built-in Undervoltage Lockout Protection
- Thermal and Overcurrent Protection
- 2-mm  $\times$  2-mm 6-Pin SON-Package with 0.8-mm Height

### 2 Applications

- USB On the Go (OTG)
- HDMI
- Portable Communication Devices
- PCMCIA Cards
- Mobile Phones, Smart Phones
- Handheld Meters

### 3 Description

The TPS60151 is a switched capacitor voltage converter which produces a regulated, low noise, and low-ripple output voltage of 5 V from an unregulated input voltage. It maintains 5-V regulation even when  $V_{IN}$  is greater than 5 V.

The 5-V output can supply a minimum of 140-mA current.

The TPS60151 has built-in current limit and output reverse current protection that are ideal for HDMI, USB OTG and other battery powered applications.

TPS60151 operates in skip mode when the load current falls below 8 mA under typical condition. In skip mode operation, quiescent current is reduced to 90  $\mu$ A.

Only 3 external capacitors are needed to generate the output voltage, thereby saving PCB space.

Inrush current is limited by the soft-start function during power on and power transient states.

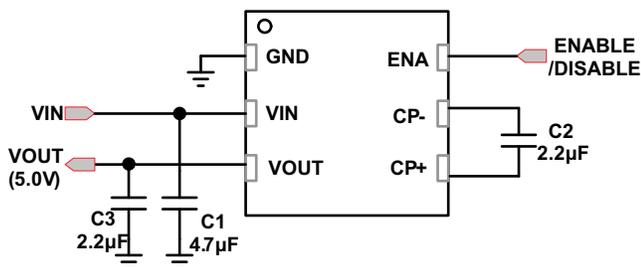

The TPS60151 operates over a free air temperature range of  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ . The device is available with a small 2-mm  $\times$  2-mm 6-pin SON package (QFN).

#### Device Information<sup>(1)</sup>

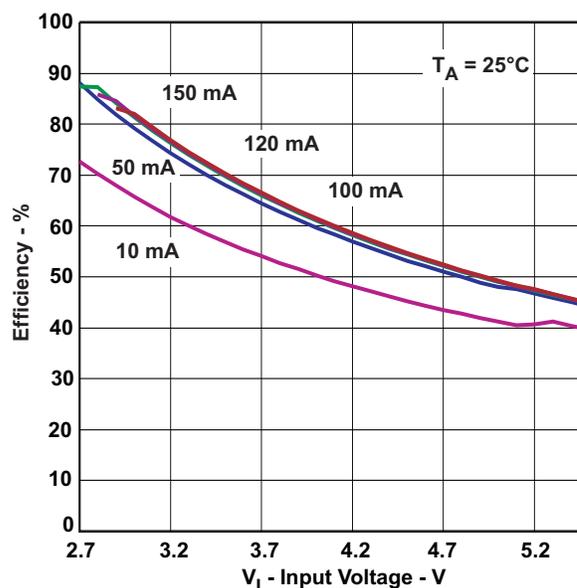

PART NUMBER	PACKAGE	BODY SIZE (NOM)
TPS60151	WSON (6)	2.00 mm $\times$ 2.00 mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.

CP+	4	–	Connect to the flying capacitor
CP–	5	–	Connect to the flying capacitor
ENA	6	IN	Hardware enable/disable pin (High = Enable)

## 7 Specifications

### 7.1 Absolute Maximum Ratings

Over operating free-air temperature range (unless otherwise noted) <sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>IN</sub>	Input voltage (all pins)	-0.3	7	V
T <sub>A</sub>	Operating temperature	-40	85	°C
T <sub>J</sub>	Maximum operating junction temperature		150	°C
T <sub>stg</sub>	Storage temperature	-55	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

### 7.2 ESD Ratings

		VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)(2)</sup>	±2000
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(3)</sup>	±500

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.  
 (2) The Human body model (HBM) is a 100 pF capacitor discharged through a 1.5 kΩ resistor into each pin. The testing is done according JEDECs EIA/JESD22-A114.  
 (3) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 7.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V <sub>IN</sub>	Input voltage	2.7		5.5	V
T <sub>A</sub>	Operating ambient temperature	-40		85	°C
T <sub>J</sub>	Operating junction temperature	-40		125	°C
C <sub>IN</sub>	Input capacitor	2.2			μF
C <sub>OUT</sub>	Output capacitor	2.2			μF
C <sub>F</sub>	Flying capacitor	1.0			μF

### 7.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>	TPS60151	UNIT	
	DRV (WSON)		
	6 PINS		
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	69.1	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	79.8	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	38.6	°C/W
ψ <sub>JT</sub>	Junction-to-top characterization parameter	1.2	°C/W
ψ <sub>JB</sub>	Junction-to-board characterization parameter	38.4	°C/W
R <sub>θJC(bot)</sub>	Junction-to-case (bottom) thermal resistance	9.2	°C/W

- (1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report, [SPRA953](#).

## 7.5 Electrical Characteristics

 $V_{IN} = 3.6\text{ V}$ ,  $T_A = -40^\circ\text{C}$  to  $+85^\circ\text{C}$ , typical values are at  $T_A = 25^\circ\text{C}$ ,  $C1 = C3 = 2.2\ \mu\text{F}$ ,  $C2 = 1\ \mu\text{F}$  (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>POWER STAGE</b>						
$V_{IN}$	Input voltage range		2.7		5.5	V
$V_{UVLO}$	Undervoltage lockout threshold			1.9	2.1	V
$I_Q$	Operating quiescent current	$I_{OUT} = 140\text{ mA}$ , Enable = $V_{IN}$		4.7		mA
$I_{Qskip}$	Skip mode operating quiescent current	$I_{OUT} = 0\text{ mA}$ , Enable = $V_{IN}$ (no switching)		80		$\mu\text{A}$
		$I_{OUT} = 0\text{ mA}$ , Enable = $V_{IN}$ (minimum switching)		90		$\mu\text{A}$
$I_{SD}$	Shutdown current	$2.7\text{ V} \leq V_{IN} \leq 5.5\text{ V}$ , Enable = 0 V		4	10	$\mu\text{A}$
$V_{OUT}$	Output voltage <sup>(1)</sup>	$I_{OUT} \leq 50\text{ mA}$ , $2.7\text{ V} \leq V_{IN} < 5.5\text{ V}$	4.8	5	5.2	V
		$I_{OUT} \leq 50\text{ mA}$ , $3.1\text{ V} \leq V_{IN} < 5.5\text{ V}$	4.8	5	5.15	V
$V_{OUT(skip)}$	Skip mode output voltage	$I_{OUT} = 0\text{ mA}$ , $2.7\text{ V} \leq V_{IN} \leq 5.5\text{ V}$		$V_{OUT} + 0.1$		V
		$I_{OUT} = 0\text{ mA}$ , $3.1\text{ V} \leq V_{IN} \leq 5.5\text{ V}$		$V_{OUT} + 0.1$	5.25	V
$F_{SW}$	Switching frequency			1.5		MHz
$t_{SS}$	Soft-start time	From the rising edge of enable to 90% output		150		$\mu\text{s}$
<b>OUTPUT CURRENT</b>						
$I_{OUT\_nom}$	Maximum output current	$V_{OUT}$ remains between 4.8 V and 5.2 V, $3.1\text{ V} \leq V_{IN} \leq 5.5\text{ V}$	120			mA
		$3.3\text{ V} < V_{IN} < 5.5\text{ V}$	140			
$I_{OUT\_max}$	Current limit	$V_{OUT} = 4.5\text{ V}$			500	mA
$I_{OUT\_short}$	Short circuit current <sup>(2)</sup>	$V_{OUT} = 0\text{ V}$		80		mA
<b>RIPPLE VOLTAGE</b>						
$V_R$	Output ripple voltage	$I_{OUT} = 140\text{ mA}$		30		mV
<b>ENABLE CONTROL</b>						
$V_{HI}$	Logic high input voltage	$2.7\text{ V} \leq V_{IN} \leq 5.5\text{ V}$	1.3		$V_{IN}$	V
$V_{LI}$	Logic low input voltage		-0.2		0.4	V
$I_{HI}$	Logic high input current				1	$\mu\text{A}$
$I_{LI}$	Logic low input current				1	$\mu\text{A}$
<b>THERMAL SHUTDOWN</b>						
$T_{SD}$	Shutdown temperature			160		$^\circ\text{C}$
$T_{RC}$	Shutdown recovery			140		$^\circ\text{C}$

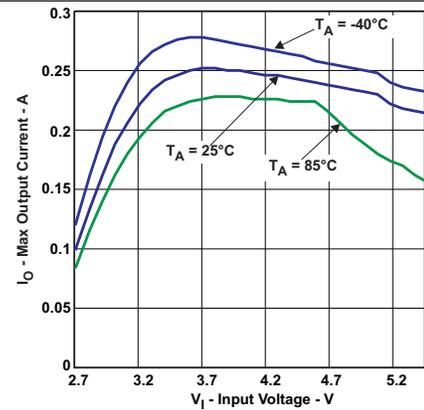

(1) When in skip mode, output voltage can exceed  $V_{OUT}$  spec because  $V_{OUT(skip)} = V_{OUT} + 0.1$ .

(2) TPS60151 has internal protection circuit to protect IC when  $V_{OUT}$  shorted to GND.

## 7.6 Typical Characteristics

**Figure 1. Quiescent Current vs Input Voltage**

**Figure 2. Maximum Output Current vs Input Voltage at Temperature**

## 8 Detailed Description

### 8.1 Overview

The TPS60151, regulated charge pump, provides a regulated output voltage for various input voltages. The TPS60151 regulates the voltage across the flying capacitor to 2.5 V and controls the voltage drop of Q1 and Q2 while a conversion clock with 50% duty cycle drives the FETs.

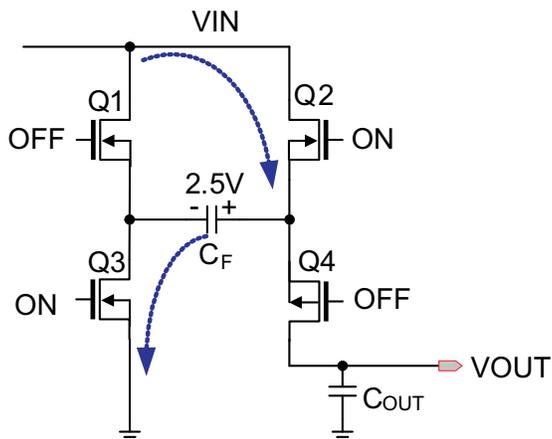

Figure 3. Charging Mode

During the first half cycle, Q2 and Q3 transistors are turned on and flying capacitor,  $C_F$ , will be charged to 2.5 V ideally.

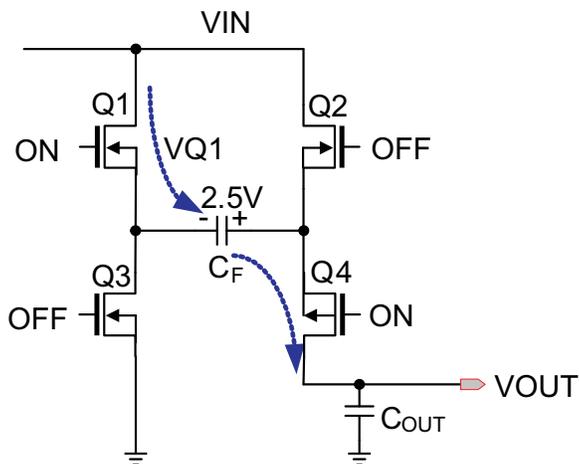

Figure 4. Discharging Mode

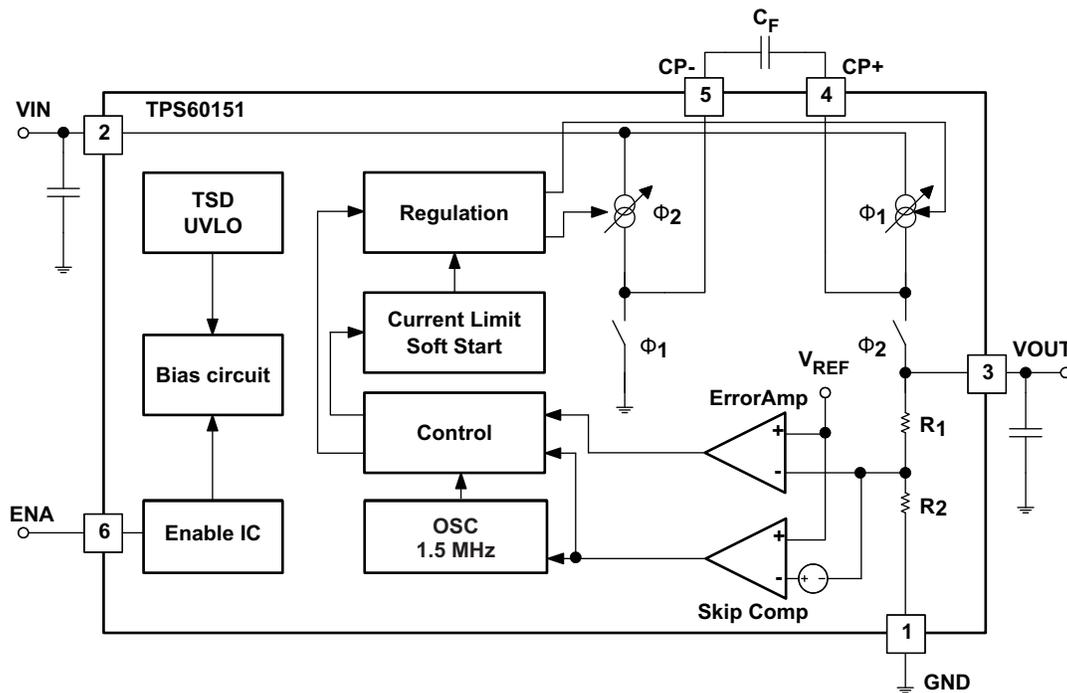

During the second half cycle, Q1 and Q4 transistors are turned on. Capacitor  $C_F$  will then be discharged to output.

The output voltage can be calculated as follows:

$$V_{out} = V_{IN} - V_{Q1} + V(C_F) - V_{Q4} = V_{IN} - V_{Q1} + 2.5 \text{ V} - V_{Q4} = 5 \text{ V. (Ideal)} \quad (1)$$

The output voltage is regulated by output feedback and an internally compensated voltage control loop.

## 8.2 Functional Block Diagram

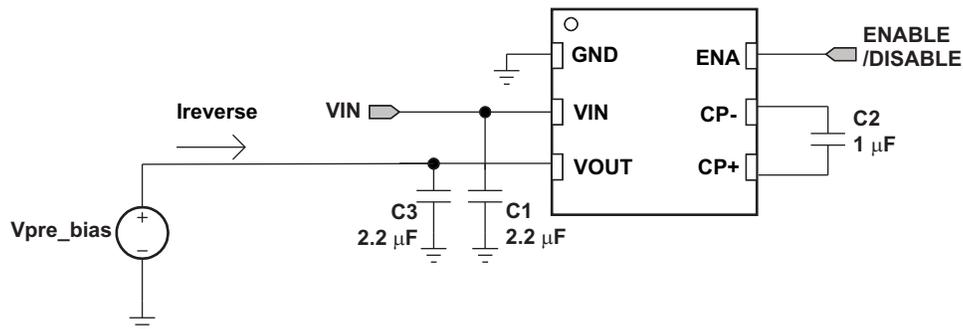

## 8.3 Feature Description

### 8.3.1 Enable

An enable pin on the regulator is used to place the device into an energy-saving shutdown mode. In this mode, the output is disconnected from the input and the input quiescent current is reduced to 10  $\mu\text{A}$  maximum.

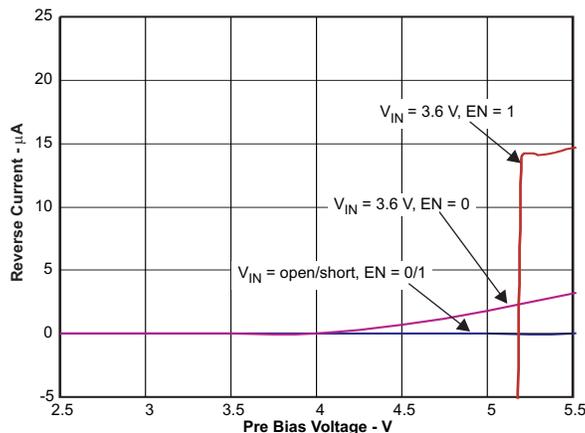

### 8.3.2 Output Reverse Current Protection

Applications like HDMI or USB OTG generally do not tolerate output reverse current that can drain power from connected devices. Special considerations were put in place to prevent that from happening. [Figure 5](#) is a testing circuit; and, [Figure 6](#) shows reverse current protection test results under various conditions.

**Figure 5. Output Reverse Current Test Setup**

**Feature Description (continued)**

**Figure 6. Reverse Current Test Results (Typical)**

**8.3.3 Undervoltage Lockout**

When the input voltage drops, the undervoltage lockout prevents misoperation by switching off the device. The converter starts operation again when the input voltage exceeds the threshold, provided the enable pin is high.

**8.3.4 Thermal Shutdown Protection**

The regulator has thermal shutdown circuitry that protects it from damage caused by overload conditions. The thermal protection circuitry disables the output when the junction temperature reached approximately 160°C, allowing the device to cool. When the junction temperature cools to approximately 140°C, the output circuitry is automatically re-enabled. Continuously running the regulator into thermal shutdown can degrade reliability. The regulator also provides current limit to protect itself and the load.

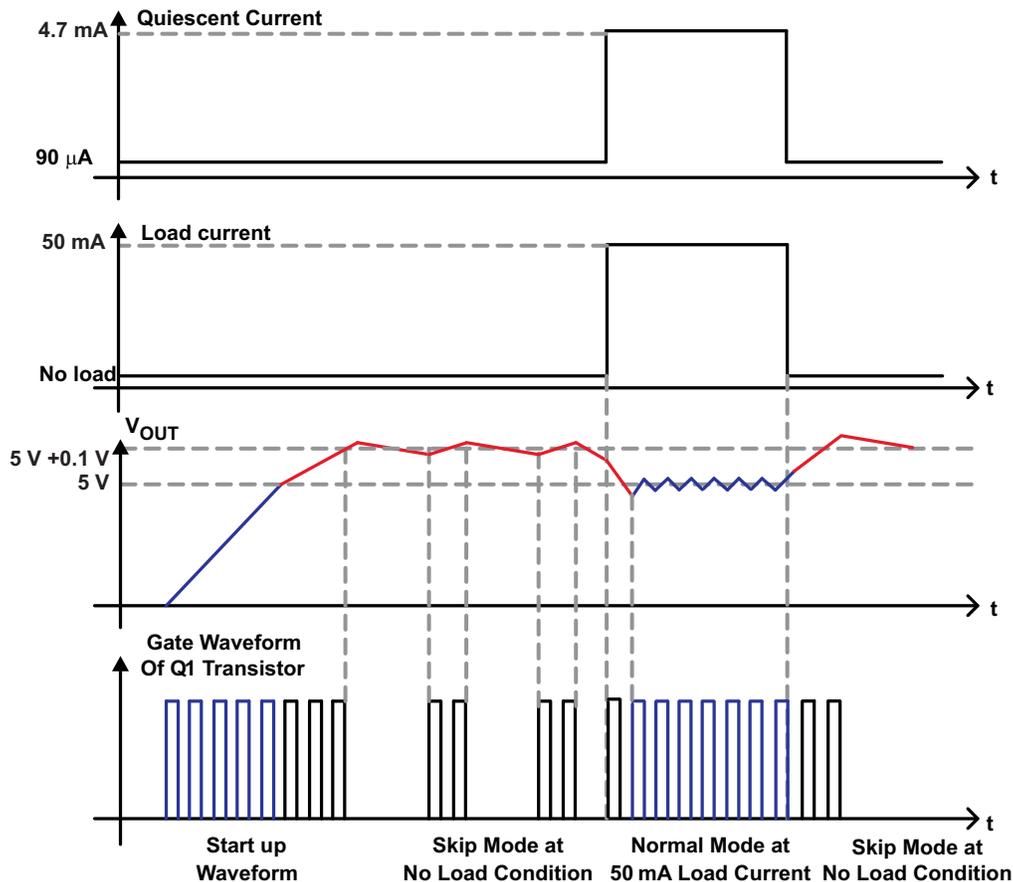

**8.4 Device Functional Modes**

**8.4.1 Soft Start**

An internal soft start limits the inrush current when the device is being enabled.

## Device Functional Modes (continued)

### 8.4.2 Normal Mode and Skip Mode Operation

**Figure 7. Normal Mode and Skip Mode Operation**

The TPS60151 has skip mode operation as shown in [Figure 7](#). The TPS60151 enters skip mode if the output voltage reaches  $5\text{ V} + 0.1\text{ V}$  and the load current is below 8 mA (typical). In skip mode, the TPS60151 disables the oscillator and decreases the pre-bias current of the output stage to reduce the power consumption. Once the output voltage dips below threshold voltage,  $5\text{ V} + 0.1\text{ V}$ , the TPS60151 begins switching to increase output voltage until the output reaches  $5\text{ V} + 0.1\text{ V}$ . When the output voltage dips below 5 V, the TPS60151 returns to normal pulse width modulation (PWM) mode; thereby re-enabling the oscillator and increasing the pre-bias current of the output stage to supply output current.

The skip threshold voltage and current depend on input voltage and output current conditions.

### 8.4.3 Over-current Protection and Short-Circuit Protection

The TPS60151 has internal short circuit protection to protect the IC when the output is over loaded or shorted to ground. [Figure 8](#) illustrates the protection circuit.  $I_P$  is directly related to  $I_{OUT}$  and the maximum  $I_P$  is clamped by  $IR3 * k * n$ . The TPS60151 ensures a current limit of 500 mA or less which is mandated by the HDMI electrical specification. To further avoid damage when output is shorted to ground, the short circuit protection circuitry senses the output voltage and adjusts  $V_{bias}$  down to clamp the maximum output current to a lower value –80 mA (typical).

Device Functional Modes (continued)

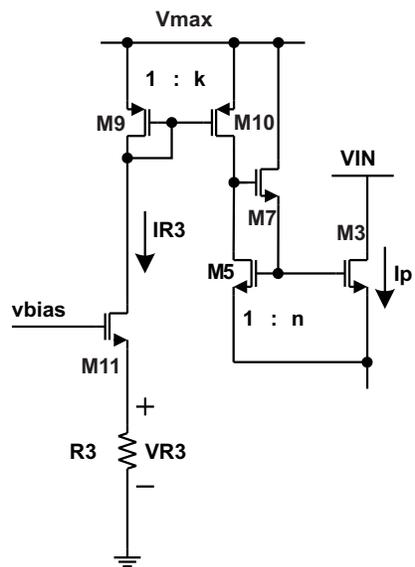

Figure 8. Current Limit

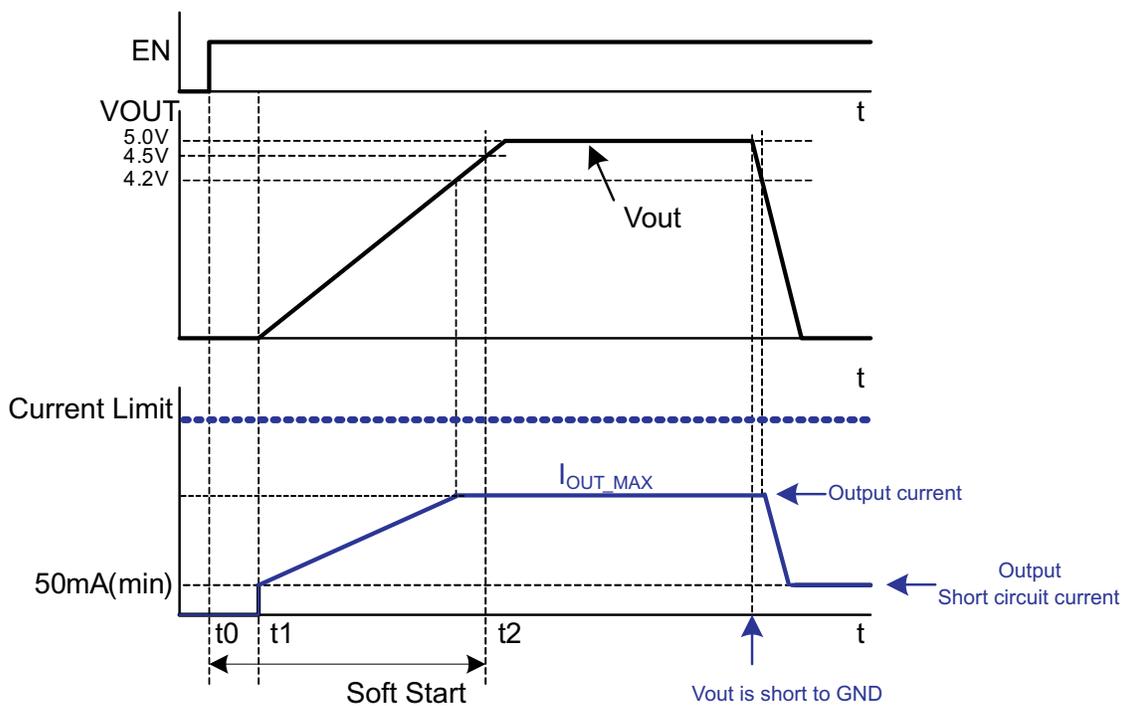

Figure 9. Maximum Output Current Capability and Short Circuit Protection

## 9 Application and Implementation

### NOTE

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

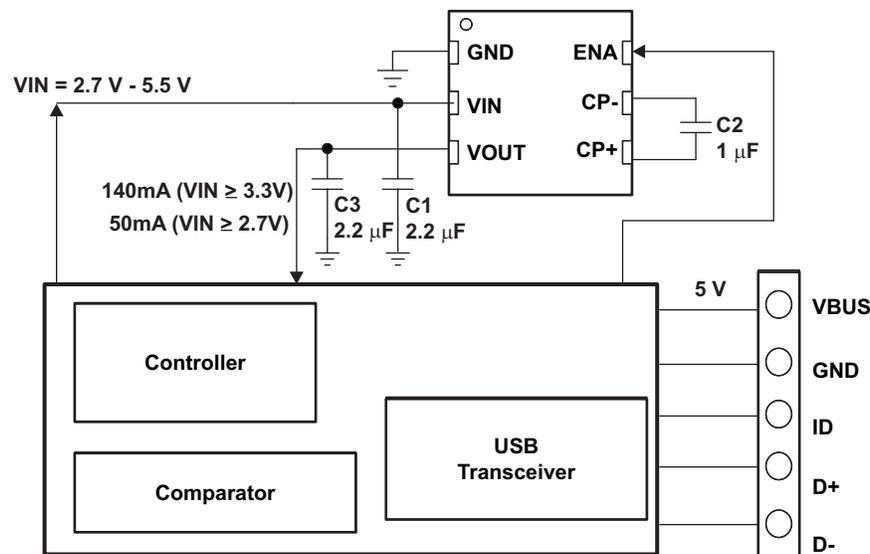

### 9.1 Application Information

Most of today's battery-powered portable electronics allow and/or require data transfer with a PC. One of the fastest data transfer protocols is via USB OTG. As [Figure 10](#) shows, the USB OTG circuitry in the portable device requires a 5-V power rail and up to 140mA of current. The HDMI specification calls for a 5-V power rail that can source 55mA or more current. The TPS60151 may be used to provide a 5-V power rail in a battery powered system.

Alternatively, low-cost portable electronics with small LCD displays require a low-cost solution for providing the WLED backlight. As shown in [Figure 26](#), the TPS60151 can also be used to drive several WLEDs in parallel, with the help of ballast resistors.

### 9.2 Typical Application

[Figure 10](#) shows USB OTG circuitry.

**Figure 10. Application Circuit for OTG System**

#### 9.2.1 Design Requirements

The design guideline provides a component selection to operate the device within the recommended operating conditions.

#### 9.2.2 Detailed Design Procedure

##### 9.2.2.1 Capacitor Selection

For minimum output voltage ripple, the output capacitor ( $C_{OUT}$ ) should be a surface-mount ceramic capacitor. Tantalum capacitors generally have a higher effective series resistance (ESR) and may contribute to higher output voltage ripple. Leaded capacitors also increase ripple due to the higher inductance of the package itself. To achieve the best operation with low input voltage and high load current, the input and flying capacitors ( $C_{IN}$  and  $C_{FLY}$ , respectively) should also be surface-mount ceramic types.

Typical Application (continued)

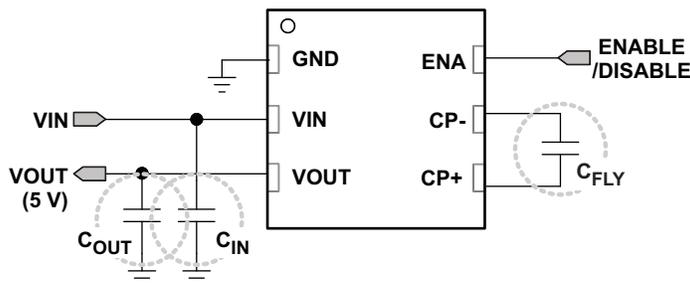

Figure 11. Capacitors

Generally, C<sub>FLY</sub> can be calculated by the following simple equation,

$$Q_{\text{charging}} = C \times v = C_{\text{FLY}} \times \Delta V_{\text{CFLY}},$$

$$Q_{\text{discharging}} = i_{\text{discharge}} \times t = 2 \times I_{\text{LOAD(MAX)}} \times \left(\frac{T}{2}\right), \text{ half duty.} \tag{2}$$

$$\therefore 2 \times I_{\text{LOAD(MAX)}} \times \left(\frac{T}{2}\right) = C_{\text{FLY}} \times \Delta V_{\text{CFLY}}$$

Both equation should be same,

$$\therefore C_{\text{FLY}} \geq \frac{2 \times I_{\text{LOAD(MAX)}} \times \left(\frac{T}{2}\right)}{\Delta V_{\text{CFLY}}} = \frac{I_{\text{LOAD(MAX)}}}{\Delta V_{\text{CFLY}} \times f} \tag{3}$$

If I<sub>LOAD</sub> = 140 mA, f = 1.5 MHz, and ΔV<sub>CFLY</sub> = 100 mV, the minimum value of the flying capacitor should be 1 μF.

Output capacitance, C<sub>OUT</sub>, is also strongly related to output ripple voltage and loop stability,

$$V_{\text{OUT(RIPPLE)}} = \frac{I_{\text{LOAD(MAX)}}}{(2 \times f \times C_{\text{OUT}})} + 2I_{\text{LOAD(MAX)}} \times \text{ESR}_{\text{COUT}} \tag{4}$$

The minimum output capacitance for all output levels is 2.2 μF due to control stability. Larger ceramic capacitors or low ESR capacitors can be used to lower the output ripple voltage.

Table 1. Suggested Capacitors (Input / Output / Flying Capacitor)

VALUE	DIELECTRIC MATERIAL	PACKAGE SIZE	RATED VOLTAGE
4.7 μF	X5R or X7R	0603	10 V
2.2 μF	X5R or X7R	0603	10 V

The efficiency of the charge pump regulator varies with the output voltage, the applied input voltage and the load current.

The approximate efficiency in normal operating mode is given by:

$$\text{Efficiency(\%)} = \frac{\text{PD(out)}}{\text{PD(in)}} \times 100 = \frac{V_{\text{OUT}} \times I_{\text{OUT}}}{V_{\text{IN}} \times I_{\text{IN}}} \times 100, I_{\text{IN}} = 2 \times I_{\text{OUT}} + I_{\text{Q}} \tag{5}$$

$$\text{Efficiency(\%)} = \frac{V_{\text{OUT}}}{2 \times V_{\text{IN}}} \times 100 (I_{\text{IN}} = 2 \times I_{\text{OUT}}) \text{ Quiescent current was neglected.} \tag{6}$$

### 9.3 System Example

#### 9.3.1 Circuit for Driving White LEDs

**Figure 26. Application Circuit for Driving White LEDs**

## 10 Power Supply Recommendations

The TPS60151 has no special requirements for its input power supply. The input power supply's output current needs to be rated according to the supply voltage, output voltage and output current of the TPS60151.

## 11 Layout

### 11.1 Layout Guidelines

Large transient currents flow in the VIN, VOUT, and GND traces. To minimize both input and output ripple, keep the capacitors as close as possible to the regulator using short, direct circuit traces.

### 11.2 Layout Example

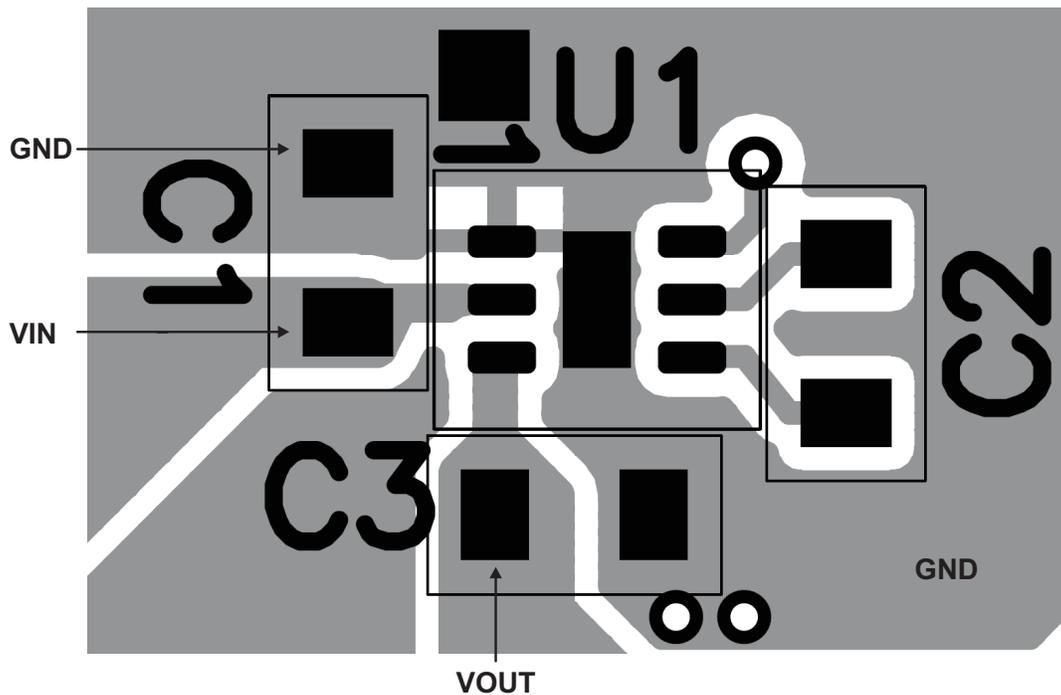

Figure 27. Recommended PCB Layout

## 12 Device and Documentation Support

### 12.1 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. In the upper right corner, click on *Alert me* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

### 12.2 Community Resources

The following links connect to TI community resources. Linked contents are provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

**TI E2E™ Online Community** *TI's Engineer-to-Engineer (E2E) Community*. Created to foster collaboration among engineers. At e2e.ti.com, you can ask questions, share knowledge, explore ideas and help solve problems with fellow engineers.

**Design Support** *TI's Design Support* Quickly find helpful E2E forums along with design support tools and contact information for technical support.

[SLYZ022](#) — *TI Glossary*.

This glossary lists and explains terms, acronyms, and definitions.

## 13 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TPS60151DRVR	ACTIVE	WSON	DRV	6	3000	RoHS & Green	NIPDAU   NIPDAUAG	Level-1-260C-UNLIM	-40 to 85	OCN	<a href="#">Samples</a>
TPS60151DRV/T	ACTIVE	WSON	DRV	6	250	RoHS & Green	NIPDAU   NIPDAUAG	Level-1-260C-UNLIM	-40 to 85	OCN	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

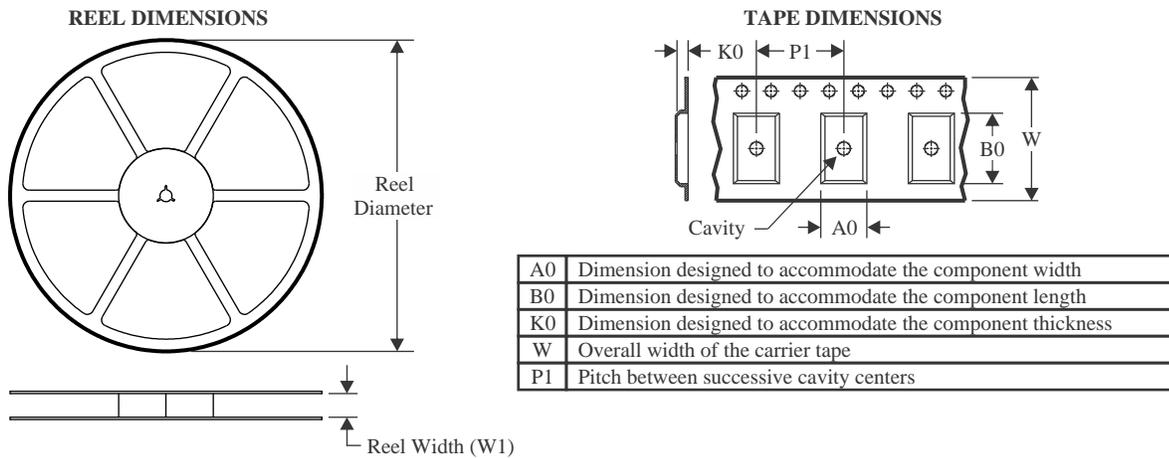

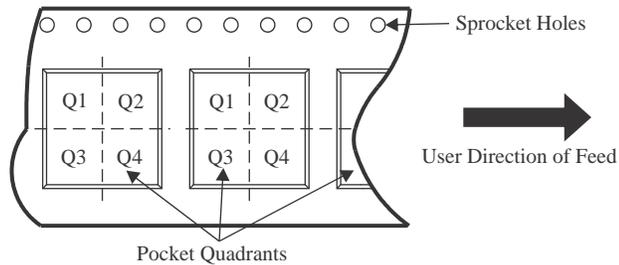

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

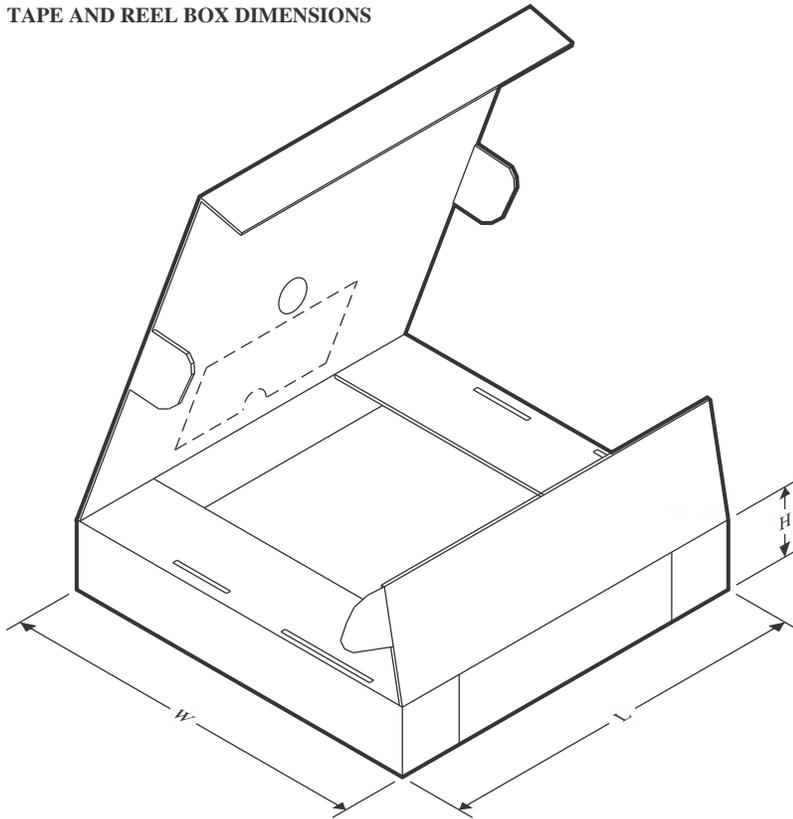

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## GENERIC PACKAGE VIEW

DRV 6

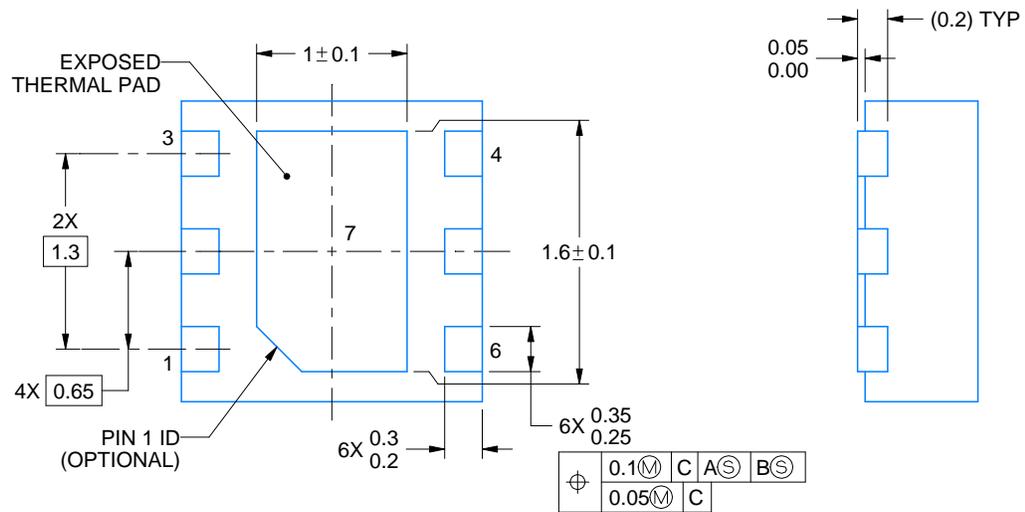

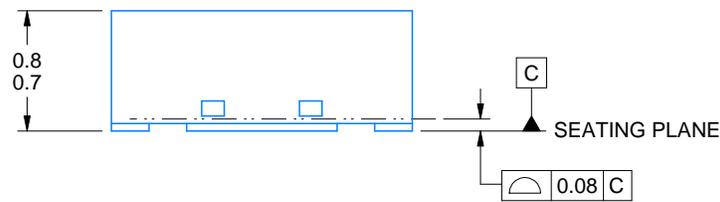

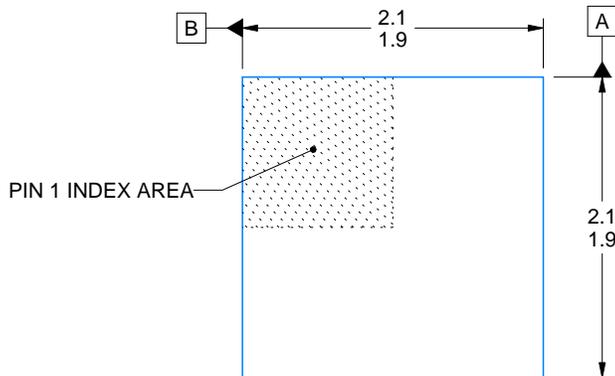

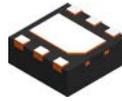

WSON - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

Images above are just a representation of the package family, actual package may vary.  
Refer to the product data sheet for package details.

4206925/F

4222173/B 04/2018

NOTES:

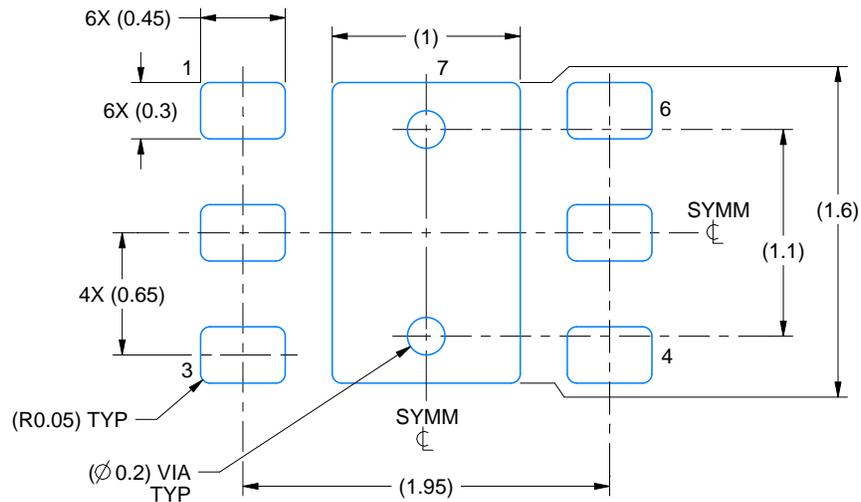

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.

# EXAMPLE BOARD LAYOUT

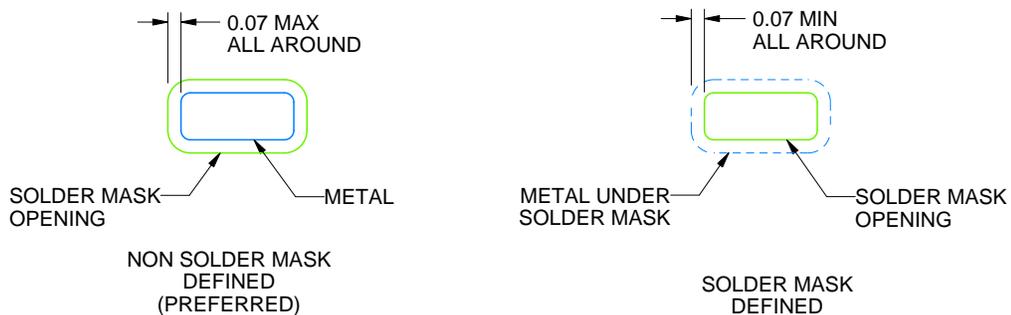

DRV0006A

WSON - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

LAND PATTERN EXAMPLE  
SCALE:25X

SOLDER MASK DETAILS

4222173/B 04/2018

NOTES: (continued)

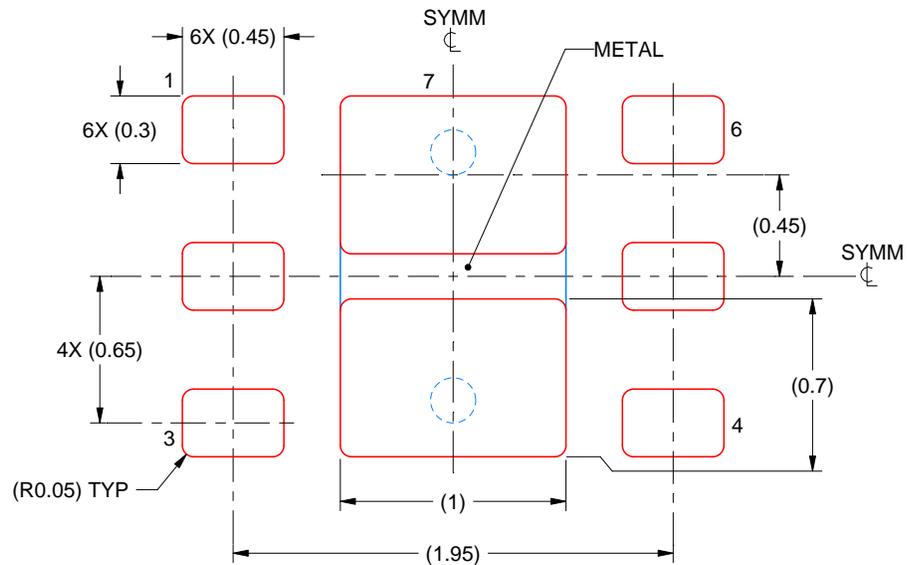

4. This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 ([www.ti.com/lit/sluea271](http://www.ti.com/lit/sluea271)).
5. Vias are optional depending on application, refer to device data sheet. If some or all are implemented, recommended via locations are shown.

# EXAMPLE STENCIL DESIGN

DRV0006A

WSON - 0.8 mm max height

PLASTIC SMALL OUTLINE - NO LEAD

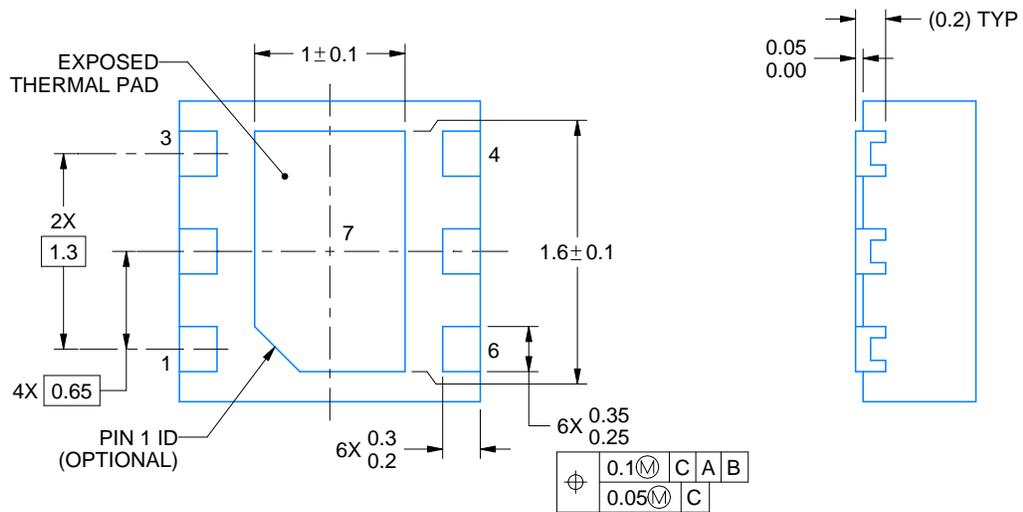

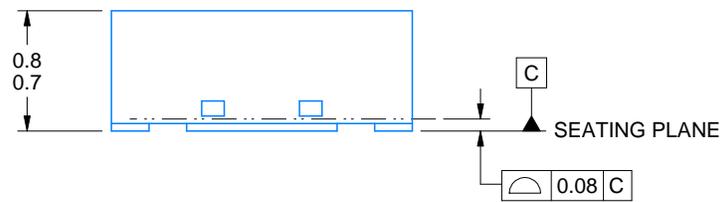

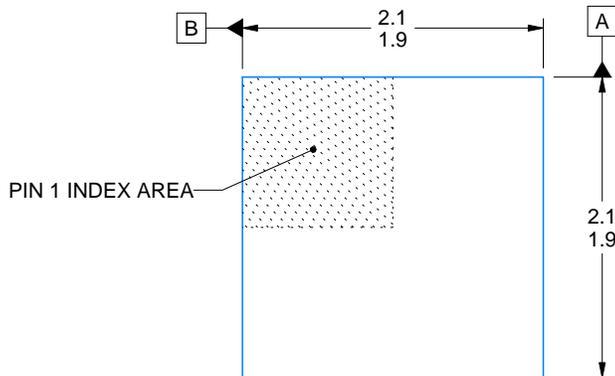

SOLDER PASTE EXAMPLE  
BASED ON 0.125 mm THICK STENCIL

EXPOSED PAD #7  
88% PRINTED SOLDER COVERAGE BY AREA UNDER PACKAGE  
SCALE:30X

4222173/B 04/2018

NOTES: (continued)

6. Laser cutting apertures with trapezoidal walls and rounded corners may offer better paste release. IPC-7525 may have alternate design recommendations.

4225563/A 12/2019

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for thermal and mechanical performance.
