

ISOLATED DC/DC CONVERTERS

36 - 75 Vdc Input 1.8 Vdc /60 A Output

Jan. 27, 2010

Bel Power Inc., a subsidiary of Bel Fuse Inc.

0RQ1-C5TV8x

RoHS Compliant

Rev.D

Features

- Isolated
- Fixed Frequency (350 kHz)
- High Efficiency
- High Power Density
- Input Under-Voltage Protection
- Class 1, Category 2, Isolated DC/DC Converter (refer to IPC-9592)
- UL60950-1 Recognized (UL/cUL) (Pending)
- Low Cost
- Output Over-Voltage Protection
- Over Temperature Protection
- SCP/OCP
- Remote On/Off

Applications

- Networking
- Computers and peripherals
- Telecommunications

Description

The 0RQ1-C5TV8x is an isolated dc/dc converter that operates from a nominal 48 Vdc source. This converter provides up to 108 W of output power. Features include remote on/off, short circuit protection, over current protection, over-temperature protection, output over-voltage protection, input under-voltage protection. This converter is provided in a compact, through-hole package that is easy to use and provides good thermal performance.

Part Selection

Output Voltage	Input Voltage	Max. Output Current	Max. Output Power	Typical Efficiency	Model Number Active High	Model Number Active Low
1.8 Vdc	36 Vdc - 75 Vdc	60 A	108 W	89%	0RQ1-C5TV8A	0RQ1-C5TV8B
1.8 Vdc	36 Vdc - 75 Vdc	60 A	108 W	89%	0RQ1-C5TV80	0RQ1-C5TV8L

Notes: Add "G" suffix at the end of the model number to indicate Tray Packaging.

Part Number Explanation

0 R Q1 - C5 I V8 x
1 2 3 4 5 6 7

- 1---Through hole
- 2---RoHS 6, change "R" to "7" means RoHS 5
- 3---Series name, 1/4 Brick
- 4---Series code
- 5---Input range 48V wide (36-75V)
- 6---Output voltage (1.8V)
- 7---Suffix

ISOLATED DC/DC CONVERTERS

36 - 75 Vdc Input 1.8 Vdc /60 A Output

Absolute Maximum Ratings

Parameter	Min	Typ	Max	Unit	Notes
Continuous Input Voltage	-0.3	-	80	V	Non-operating
Input Transient Voltage	-	-	100	V	100 mS maximum
Remote On/Off	-0.3	-	18	V	
I/O Isolation Voltage	-	-	1500	V	
Ambient Temperature	-40	-	85	°C	
Storage Temperature	-55	-	125	°C	

Note: All specifications are typical at 25 °C unless otherwise stated.

Input Specifications

Parameter	Min	Typ	Max	Unit	Notes
Operating Input Voltage	36	48	75	V	
Input Current (full load)	-	-	4	A	
Input Current (no load)	-	70	100	mA	
Remote Off Input Current	-	5	10	mA	
Input Reflected Ripple Current (pk-pk)	-	10	20	mA	With simulated source impedance of 10 uH, 5 Hz to 20 MHz; use a 100 uF/100 V electrolytic capacitor with ESR = 1 ohm max at 200 kHz
Input Reflected Ripple Current (rms)	-	2	7	mA	
I ² t Inrush Current Transient	-	-	1	A ² s	
Turn-on Voltage Threshold	32	34	35	V	
Turn-off Voltage Threshold	30	32	34	V	

CAUTION: This converter is not internally fused. An input line fuse must be used in application.

Recommend a fast-acting fuse with maximum rating of 5A on system board. Refer to the fuse manufacture's datasheet for further information.

- Notes:** 1. This converter has internal C-L-C (0.47uF-2.2uH-6.6uF) filter.
2. All specifications are typical at 25 °C unless otherwise stated.

Output Specifications

Parameter	Min	Typ	Max	Unit	Notes
Output Voltage Set Point	1.764	1.8	1.836	V	Vin=48V, half load
Load Regulation	-	5	10	mV	Vin=48 V, Iout=0-60 A
Line Regulation	-	2	7	mV	Vin=36~75V, full load
Regulation Over Temperature (-40deg.C-85deg.C)	-	-	0.01	%Vo /C	
Ripple and Noise (pk-pk)	-	60	100	mV	Vin=48V, full load, 0-20MHz BW, with a 1uF ceramic capacitor and a 10uF tantalum capacitor at output
Ripple and Noise (rms)	-	15	30	mV	
Output Ripple and Noise(Pk-Pk) under worst case	-	-	150	mV	over all operating input voltage, load and ambient temperature condition
Output Current Range	0	-	60	A

Output Trim Equations

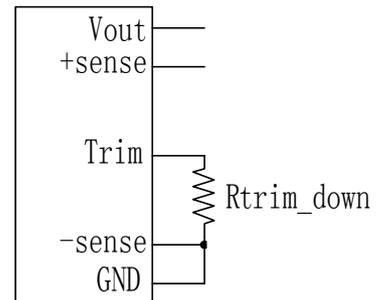

Equations for calculating the trim resistor are shown below. The Trim Down resistor should be connected between the Trim pin and Sense (-) pin. The Trim Up resistor should be connected between the Trim pin and the Sense (+). Only one of the resistors should be used for any given application.

Minimum trim down voltage is 1.44V

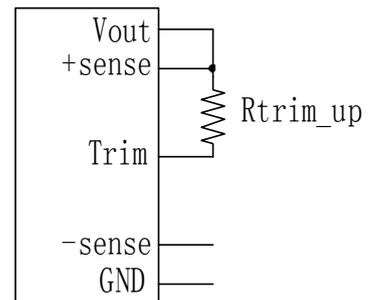

Maximum trim up voltage is 1.98V.

The total voltage increased by trim and remote sense should not exceed 10% of the nominal output voltage.

$$R_{trimdown} = \frac{511}{|\delta|} - 10.22 [k\Omega]$$

$$R_{trimup} = \frac{(100 + \delta) \cdot V_o \cdot 5.11 - 626}{1.225 \cdot \delta} - 10.22 [k\Omega]$$

Note:
$$\delta = \frac{(V_{adj} - V_o)}{V_o} \times 100 [\%]$$

Vadj is the desired output voltage

V_o = 1.804V @I_{out}=0

Remote Sense

This module has remote sense compensation feature. It can minimize the effects of resistance between module's output and load in system layout and facilitates accurate voltage regulation at load terminals or other selected point.

1. The remote sense lines carries very little current and hence do not require a large cross-sectional area.
2. This module compensates for a maximum drop of 10% of the nominal output voltage.
3. If the unit is already trimmed up, the available remote sense compensation range should be correspondingly reduced. The total voltage increased by trim and remote sense should not exceed 10% of the nominal output voltage.
4. When using remote sense compensation, all the resistance, parasitic inductance and capacitance of the system are incorporated within the feedback loop of this module. This can make an effect on the module's compensation, affecting the stability and dynamic response. A 0.1uF ceramic capacitor can be connected at the point of load to de-couple noise on the sense wires.
5. Recommend the connection of remote sense compensation as below figure. There are a resistor RS+ (10 ohm) from Vo+ to Sense+ and a resistor RS- (10 ohm) from Vo- to Sense- inside of this module.

6. If not using remote sense compensation, please connect sense directly to output at module's pin, that is, connect sense+ to Vo+ and sense- to Vo- at module's pin, the shorter the better. See below figure.

Over Current Protection

To provide protection in a fault output overload condition, the module is equipped with internal current-limiting circuitry and can endure current limiting for a few milli-seconds. If the over current condition persists beyond a few milliseconds, the module will shut down into hiccup mode and restart once every 210mS. The module operates normally when the output current goes into specified range. The typical average output current is 3A during hiccup.

Vin=48V

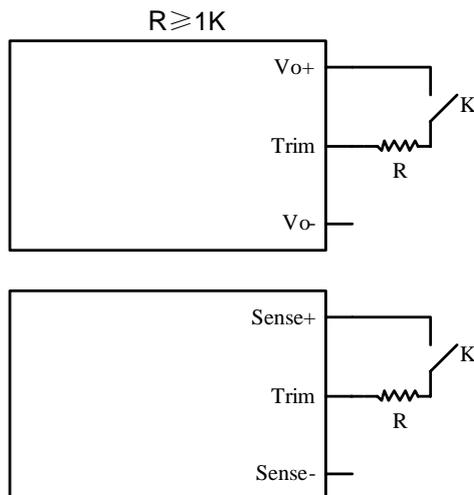

Expansion of on time portion

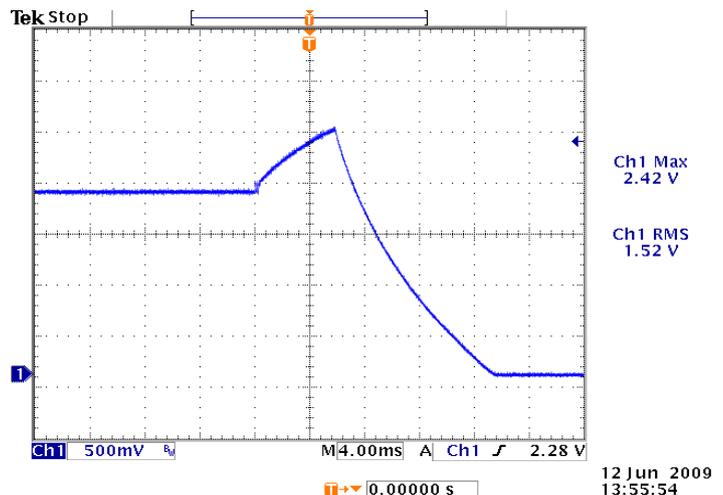

Over Voltage Protection

The output overvoltage protection consists of circuitry that monitors the voltage on the output terminals. If the voltage on the output terminals exceeds the over voltage protection threshold, the module will shutdown into hiccup mode and restart once every 350mS. The module operates normally when the fault is cleared.

Test setup:

Waveform:

Vin=48V, Iout=5A

ISOLATED DC/DC CONVERTERS

Jan. 27, 2010

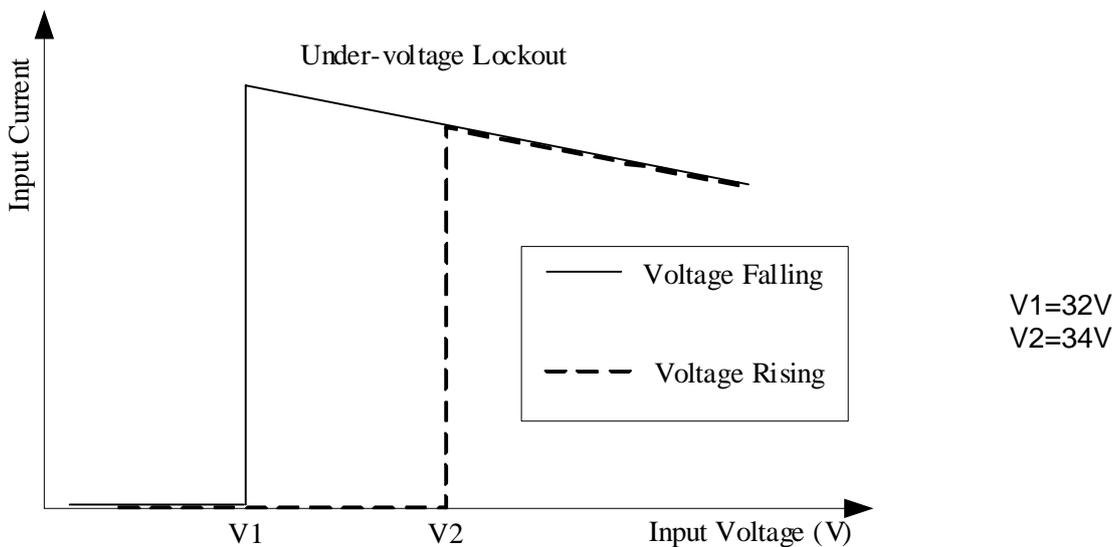

Bel Power Inc., a subsidiary of Bel Fuse Inc.

Over Temperature Protection

The OTP is achieved by thermistor R60 and the threshold is set at 120C in non-latch mode; the hottest component Q1 reaches 120C with 100LFM air flow correspondingly. It will restart automatically when the temperature falls down to 100C. The protecting point will be varied a little under different conditions (air flow, ambient temperature, input voltage, load...).
